Machine Learning based Survival Group Prediction in Glioblastoma

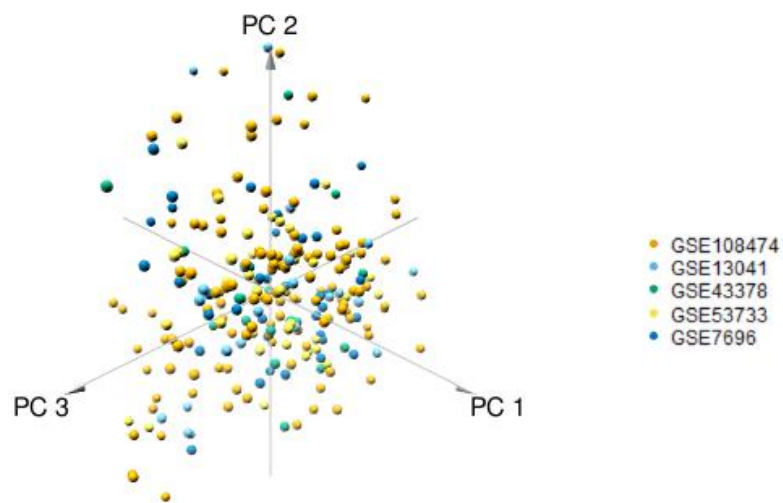

Figure S1. PCA plot of the merged data.

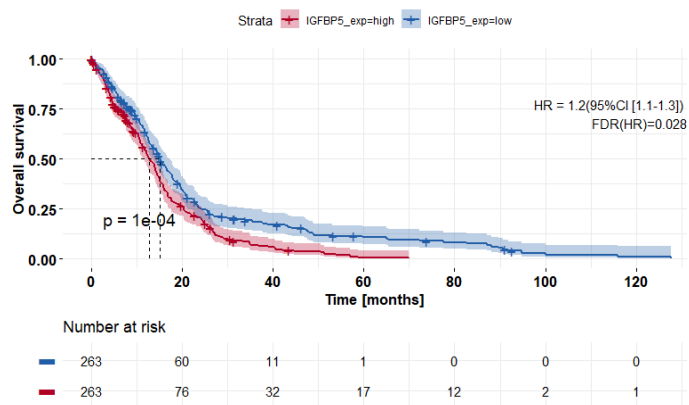

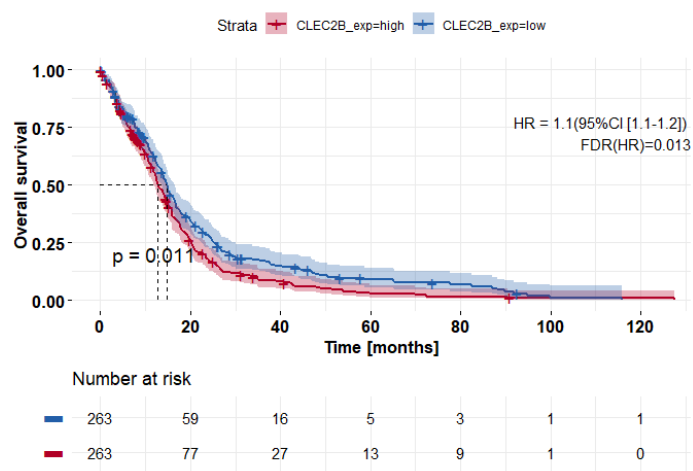

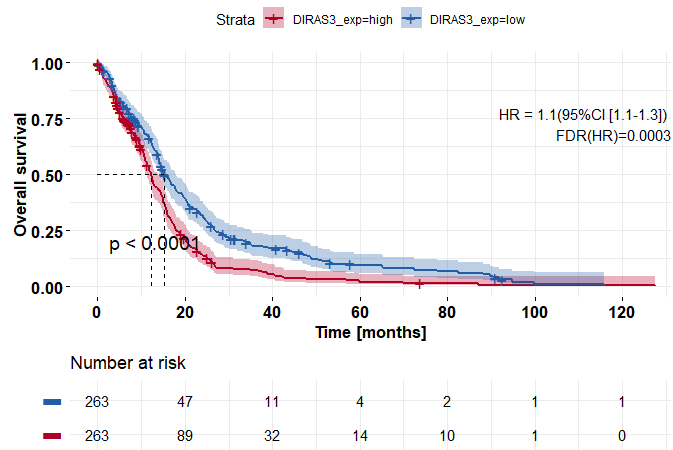

Figure S2: Univariate KM plots for some of the biomarkers found in the study with 50% non-overlapping quantiles. RARRES2 & IGFBP5 known biomarkers of Glioblastoma, CLEC2B, a known biomarker of melanoma, DEPTOR, and DIRAS3 known biomarkers of ovarian neoplasms were found to have survival significance in glioblastoma are shown here.
